                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 in non-prostate tissue. PS118 polypeptides, polynucleotides, antibodies, agonists and inhibitors are useful for detecting, diagnosing, staging, monitoring, prognosticating, preventing and treating (including by genetic immunisation), or determining the predisposition of an individual to, diseases and conditions of the prostate, such as benign prostatic hyperplasia, prostatitis, prostatic intraeptitelial neoplasia, prostate cancer, tumours and metastases. The PS118 polypeptides can be produced by expression of PS118 polynucleotides in transfected host cells, and immunogenic peptides are useful for raising PS118-specific antibodies of diagnostic use. The methods and reagents of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        antibodies of diagnostic use. The methods and reagents of the invention may provide an early means of detecting diseases of the prostate and may also provide new markers which can differentiate between the clinically important and unimportant prostate cancers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Detecting presence of target PS118 polynucleotide in test sample, useful for detecting, diagnosing, staging, monitoring, prognosticating, preventing or treating or determining predisposition to prostate disease
